

**RFP 26-007 Herbicide Services
Q&A #1**

Question 1: The bid is requesting full ROW width sprayed. Can you provide me with an average ROW width on these county roads so I can calculate my average acres per mile?

Answer: ROW widths vary and many are prescriptive rights, meaning maintenance from fence line to fence line. Typical, rural road sections are 70' wide, however, many right-of-ways are less than this. Some right-of-ways may be more. Vegetation within curb and gutter subdivisions are typically handled by the homeowner's association (ie~Sunterra).

Assume 70 feet right-of-way width as typical. This includes 24 feet of pavement and 46 feet of width of vegetation/bar ditch.
